

AMERICAN INTERNATIONAL SCHOOL IN ABU DHABI

Teacher MAP Dashboard

Video source pack

This document is the source for a short explainer video for AISA teachers. It walks through the Teacher MAP Dashboard scene by scene: a real screenshot of the page for each scene, what is on screen, what it means for a teacher, and a ready-to-speak narration. The dashboard is a free, single web page that turns a teacher's NWEA MAP Growth exports into a classroom planning view — who grew, who needs support, how to group the class, what to say at a data meeting and what to put on the wall — without the file ever leaving the teacher's computer.

43 scenes • about 8.2 minutes of narration. Every screenshot was captured from the dashboard itself using its built-in *Load Sample Data* demo: a fictional cohort of 90 grade 5 and 6 students in four classes at “AISA Demo School”, tested Fall 2025 and Spring 2026. No real student appears anywhere in this pack.

**American International School
in Abu Dhabi**

How to use this document (for NotebookLM)

The video follows the scenes in order

This pack is a storyboard. It contains 43 numbered scenes, one per page, starting on page 5. Make the video in exactly that order, from Scene 1 to Scene 43.

Each scene has one screenshot, identified by its file name

At the top right of every scene page is a purple label, for example **Screenshot: 08-insights.png**. The large picture on that page is that screenshot. While a scene is being narrated, show **only that scene's screenshot**; switch to the next picture when the next scene begins. The picture of a scene always sits on the same page as its narration, and the Screenshot index at the end lists every ID.

Narrate from “What to say”

The block headed **What to say (narration)** is the script for that scene. “What is on screen” tells you which parts of the picture the narration refers to (so you can zoom or highlight them); “What it tells a teacher” and “Teacher action / tip” give the meaning and the practical takeaway, which you may weave in. “Timing” is the approximate length of that scene.

Tone and length

Warm, practical, teacher-to-teacher: a colleague showing another colleague a tool that saves them time, not a sales pitch and not a statistics lecture. Target total length **6 to 8 minutes** (the scene timings add up to about 8.2 minutes). If time is short, shorten the full-analysis scenes (marked “Full analysis”) rather than the opening, the essentials or the close.

The privacy message is essential

Say clearly, near the start and again at the end: **the teacher's file never leaves their computer**. The page reads it in the browser, sends nothing anywhere, loads nothing from the internet, needs no sign-in, works offline, and forgets the file when the tab closes. Nothing it remembers names a student.

Stay accurate

Do not invent features, buttons, numbers or claims that are not on these pages. Numbers quoted in the scenes come from the screenshots and are **demo data**: the sample school, classes (5A, 5B, 6A, 6B), teachers and students are fictional. Present them as “in the sample”, never as real results. The dashboard describes what the data shows; it never claims to explain why.

Audience

Classroom teachers at AISA who give the NWEA MAP Growth test, plus coordinators and leaders. Assume they know what MAP is but not every statistic; the Glossary near the end explains the terms.

The tool in one page

What it is. The AISA Teacher MAP Dashboard is one web page (a single file, *index.html*). A teacher opens it in any modern browser, loads the CSV files exported from NWEA MAP Growth, and the page instantly builds about 25 planning sections from them: headline insights, growth and achievement, movement between colour bands, gap closure, growth goals, a weekly action board, priority and celebration lists, table groups with a seating planner, classroom wall posters, a quiz to rehearse for data meetings, and more. **Who it is for:** classroom teachers first, and coordinators and leaders preparing data conversations.

1

Export from NWEA

In MAP Growth, open MAP Reports and download the *Achievement Status and Growth (ASG)* report as CSV (it carries growth), and the *Class Profile* report as CSV, once per subject (it carries the instructional areas). Same class, same term.

2

Upload

Drag all the files onto the upload box at once, or click to browse. The page reads them in the browser, matches the columns automatically and folds each student's records together. *Load Sample Data* shows everything with a fictional class first.

3

Plan

Read the essentials, filter to a class or subject, then act: print goal sheets, build table groups and a seating plan, copy the summary into PLC notes, print student-friendly wall posters, and rehearse for the data meeting.

The promises

- **Private.** The file is read in the browser and never uploaded. There is no server, no analytics, and the page makes no network request of its own.
- **Offline.** Scripts, styles, the DM Sans typeface and the AISA marks are all inside the one file, so it works without internet and behind a school filter.
- **No sign-in, no setup.** Open the page and drop the file.
- **Free.** Built for AISA teachers.
- **Nothing remembered names a student.** Only preferences (theme, motion, view, chart settings, the room shape of the seating planner) are kept on the device.

Three data modes — the page adapts to the file

Growth file

Two test windows (e.g. Fall to Spring) on most records. Everything is measured: growth, gap closure, quadrant movement.

Mixed file

A growth file where a meaningful share of records has only the current window (often late joiners). Growth panels describe the records that have a prior score.

Fall baseline

One window only, as in September. Growth panels are hidden rather than shown empty; a start-of-year view (Starting Point, tiers, norm placement, targets) takes their place.

The page opens on nine **essentials** (Spoken Briefing, Insights, Class Snapshot, Growth and Achievement, Growth Goals, Action Board, Priority Students, Wall Posters, Check My Understanding); *More analysis* reveals the rest, and every section follows the filters.

Run order at a glance

The 43 scenes in the order the video plays them, with each scene's screenshot file and approximate narration time (about 8.2 minutes in all). One page per scene follows.

SCENE 1 — The landing page

Screenshot: 01-landing.png

Timing: ~17 seconds

Screenshot: 01-landing.png — The dashboard as it opens, before any file is loaded: the purple masthead with the AISA seal and the Load MAP Data panel.

WHAT IS ON SCREEN

The deep purple masthead: the American International School in Abu Dhabi logo top left, the full white AISA seal, the title “Teacher Dashboard” and five question chips (Who grew? Who needs support? Who closed gaps? How do I group them? Can I explain this data?). On the right, the white “Load MAP Data” panel: a dashed drop box, the Load Sample Data and “How do I get this file?” buttons, zero records and students, and a green dot beside the privacy line at the bottom.

WHAT IT TELLS A TEACHER

This is the whole setup. There is no account, no install and no server: the dashboard is one web page that runs in the teacher’s own browser.

WHAT TO SAY (NARRATION)

This is the AISA Teacher MAP Dashboard. It turns the files you already export from NWEA MAP Growth into a plan for your class, with nothing to install and no sign-in. And notice the line at the bottom: your file never leaves this browser.

TEACHER ACTION / TIP

Drop your CSV files on the dashed box, or press Load Sample Data to explore everything first with fictional students.

Timing: ~17 seconds

SCENE 2 — The Getting Started card

Screenshot: 02-getting-started.png

Timing: ~12 seconds

GETTING STARTED

Turn your MAP data into a plan in under a minute

No sign-in, no setup. Upload your NWEA ASG export, plus the Class Profile export for each subject, and this dashboard instantly shows who grew, who needs support, who closed gaps, and how to group your class — all in your browser. **Uploading in the fall with only one test window?** The dashboard detects that and switches to a start-of-year view with tiers, norm placement and growth targets instead of showing empty growth panels.

Try it with sample data

Upload my CSV

Prefer a manual? [Download the user guide \(PDF\)](#) — every section explained, with pictures. The ? in the corner of each section explains it in place.

1

Export two reports from NWEA MAP

The ASG (Achievement Status & Growth) report for your class, and the Class Profile report for each subject, both as CSV. Same class, same term, every student in both. In the fall, a single-term export works too.

2

Upload it here

Drag the file onto the upload box, or click to browse. Your data stays on your device.

3

Plan with confidence

Explore growth, gap closure, priority & celebration lists, then build seating groups and export or print.

Screenshot: 02-getting-started.png — The Getting Started card under the upload panel: three steps from NWEA export to a plan.

WHAT IS ON SCREEN

The Getting Started card, “Turn your MAP data into a plan in under a minute”: “No sign-in, no setup”, a note that a fall upload with one test window switches to a start-of-year view, the purple “Try it with sample data” button and “Upload my CSV”, a link to the user guide, and on the right three numbered steps: 1 Export two reports from NWEA MAP, 2 Upload it here, 3 Plan with confidence.

WHAT IT TELLS A TEACHER

The whole workflow is three steps: export, upload, plan. No sign-in and no setup.

WHAT TO SAY (NARRATION)

A Getting Started card walks you through it. There are just three steps: export two reports from NWEA, upload them here, and plan. Or try it first with the sample data.

TEACHER ACTION / TIP

Not ready to export? Try it with sample data: a fictional class loaded exactly the way yours would be.

Timing: ~12 seconds

SCENE 3 — How do I get this file? The NWEA export steps

Screenshot: 03-export-steps.png

Timing: ~13 seconds

–Which files do I export, and what does this tool read?

Exporting from NWEA MAP Growth — you need both

1. Sign in to MAP Growth and open *MAP Reports*.
2. Run the *Achievement Status and Growth (ASG)* report for your class and terms, and download it as *CSV*. This file carries growth.
3. Run the *Class Profile* report for the same class and term, once per subject, and download each as *CSV*. These files carry the instructional areas inside each subject.
4. Return here and upload all of them together — nothing is sent anywhere.

Get both right. Same class, same term, every student in both. The dashboard folds each student's ASG record and Class Profile record into one. If the two exports disagree about a student's score, the Data Check names the student and both figures: check the exports rather than trust either number for that student.

The user guide

Download the user guide (PDF): how to export and load your file, what every number means, and what each section tells you and what to do with it. In the page itself, the ? in the corner of every section says the same in three short answers.

Good to know

- Column names are matched automatically, so slightly different exports still work. Comma, semicolon and tab separated files are all read.
- Suppressed values (*******) and missing scores are handled gracefully.
- **Fall uploads with no prior window are fully supported.** When the export has a single test window the dashboard hides the growth, gap-closure and quadrant panels — which would only show blanks — and analyses the window it has: percentile distribution, instructional tiers, distance from the US grade and season norm, and RIT targets for the rest of the year. It does not matter whether your export puts the fall test in the Start or the End columns.
- An ASG file on its own gives you everything except the instructional areas; Class Profile files on their own give you the areas and a single window, but no growth. Load both for the whole picture.
- Nothing is persisted. Only your theme and motion preferences are remembered; no student data is ever written to disk or sent anywhere.
- Not ready to export? Click *Load Sample Data* to explore every feature first, with a made-up grade 5 and 6 cohort loaded the way yours would be: an ASG export and a Class Profile export together.

Screenshot: 03-export-steps.png — “How do I get this file?” opens the NWEA export steps and what the tool reads.

WHAT IS ON SCREEN

The panel “Which files do I export, and what does this tool read?”. Left: “Exporting from NWEA MAP Growth – you need both”, four numbered steps (sign in and open MAP Reports; run the Achievement Status and Growth report and download it as CSV; run the Class Profile report once per subject as CSV; upload them all together), then “Get both right”. Right: “Good to know”, covering automatic column matching, suppressed values, fall uploads, and that nothing is persisted. Below: a link to the user guide.

WHAT IT TELLS A TEACHER

Two exports give the full picture: the Achievement Status and Growth (ASG) report carries growth; the Class Profile report, one per subject, carries the instructional areas. Same class, same term, every student in both.

WHAT TO SAY (NARRATION)

In MAP Reports, download the Achievement Status and Growth report as a CSV, plus the Class Profile report for each subject. Then select all the files at once and drop them in.

TEACHER ACTION / TIP

If the two exports disagree about a student's score, the Data Check names the student and both figures, so you can check the exports.

Timing: ~13 seconds

SCENE 4 OF 43 · GETTING STARTED

SCENE 4 — Sample data loaded

Screenshot: 04-sample-loaded.png

Timing: ~14 seconds

Screenshot: 04-sample-loaded.png — After Load Sample Data: the one-line masthead, the file stats and the green “Growth file” banner.

WHAT IS ON SCREEN

The masthead shrinks to one line: logo, “Teacher Dashboard”, the question chips and the Dark and Motion buttons. Under it: Change file, RECORDS 360, STUDENTS 90, FILE Sample data. Then a banner with a green GROWTH FILE chip: “Fall 2025 to Spring 2026. 354 records carry both windows, so growth, gap closure and quadrant movement are all measured.” (demo data).

WHAT IT TELLS A TEACHER

The banner says at once what kind of file was loaded and so what the page can measure. A record is one student in one subject: 90 students in 4 subjects make 360 records.

WHAT TO SAY (NARRATION)

Here is the built-in sample: 90 fictional grade 5 and 6 students. That is 360 records. The green banner says it is a growth file, Fall 2025 to Spring 2026, so growth can be measured.

TEACHER ACTION / TIP

Read the banner first: it tells you whether growth figures exist for the file you loaded.

Timing: ~14 seconds

WHAT IS ON SCREEN

Search (Student name or ID), Subject and Class drop-downs, the Fewer filters and Reset buttons. The second row, opened by More filters: Overview Lens, Teacher, Grade, End Band, Tier, Met Growth, Group and Gap Status. Below it, the Jump to bar: Briefing, Insights, Snapshot, Growth, Goals, Actions, Priority, Posters, Quiz, and a dashed “More analysis (16)” pill.

WHAT IT TELLS A TEACHER

Every section, card, poster and export follows these filters, so one choice turns the whole page into a view of one class, one subject or one group of students.

WHAT TO SAY (NARRATION)

Everything follows these filters. Choose a class or a subject, and every card, chart and poster describes just that group. The Jump to bar takes you straight to any section.

TEACHER ACTION / TIP

Filter to one class before a data meeting or before printing posters. Reset clears everything.

Timing: ~12 seconds

Essentials only

Screenshot: 06-essentials-vs-full.png — Essentials versus the full analysis: the Jump to bar in both states, and the More analysis card between them.

WHAT IS ON SCREEN

Top: the Jump to bar in the essentials view, nine sections and “More analysis (16)”. Middle: the More analysis card at the foot of the essentials, naming the 16 further sections, with a “Show the full analysis” button. Bottom: the Jump to bar in the full view, every section from Briefing to Data Check, ending with an “Essentials only” pill.

WHAT IT TELLS A TEACHER

The page is not overwhelming: it opens on the nine sections a class teacher acts on each term, and the deeper analysis is one click away.

WHAT TO SAY (NARRATION)

The page opens on nine essentials, so it never overwhelms. More analysis adds sixteen deeper sections. The page remembers your choice, and Essentials only takes you back.

TEACHER ACTION / TIP

Start with the essentials; open the full analysis when you prepare for a department or leadership conversation.

◀

▶

Voice

System voice (en-US)

Speed

The voice is your device's own, and the speaking happens on this machine: no audio is uploaded, downloaded, or generated by a service. That also means there is no file to save - use Copy on the Class Summary Report if you need the words to travel.

► Read the transcript instead

Screenshot: 07-briefing.png — Spoken Briefing: a narrated walk through the file, read aloud by the teacher's own device.

WHAT IS ON SCREEN

The first slide, "Our class", with big numbers (90 students, 360 records, 4 subjects; demo data) and its spoken text. A row of scene chips: The file, Where the group is, Growth, By subject, What to do next, Before you act on it. Play briefing and Stop buttons top right; arrows, a Voice picker and a Speed slider; the note that no audio is uploaded; and "Read the transcript instead".

WHAT IT TELLS A TEACHER

A short, shared summary of the file that everyone in a meeting hears together, built from the same figures as the sections below and following the filters.

WHAT TO SAY (NARRATION)

The Spoken Briefing reads a short summary of your data aloud. It uses your own device's voice, so nothing is sent anywhere. Play it at the start of a data meeting, or read the transcript.

TEACHER ACTION / TIP

Play it at the start of a data meeting, filtered to the class the meeting is about, so everyone starts from the same summary.

Timing: ~14 seconds

SCENE 8 — Insights: the headline numbers

Screenshot: 08-insights.png

Timing: ~14 seconds

Screenshot: 08-insights.png — Insights: six headline tiles, each set against a national reference.

WHAT IS ON SCREEN

Six tiles (demo data): Records in view 360 (90 students, 354 with both test windows); Median percentile 67th, “+17 vs US 50th”; At or above the 61st 58%, “+18 pts vs US 40%”; Met growth projection 57%, “+7 pts vs US 50%”; Median growth (CGP) 55.5, “+5.5 vs typical 50”; Mean RIT change +7.0, “+1.6 vs projected”. Small bars and histograms mark where the US reference sits. Copy findings and Export findings CSV buttons top right.

WHAT IT TELLS A TEACHER

In one row: whether the group is above or below national references, for achievement and for growth.

WHAT TO SAY (NARRATION)

Insights starts with the headline numbers, each against a national reference. In the sample, the median student sits at the 67th percentile. And 57 percent met their growth projection, where about half nationally would.

TEACHER ACTION / TIP

The tiles follow your filters: choose one class and they describe that class.

Timing: ~14 seconds

SCENE 9 OF 43 · ESSENTIALS

SCENE 9 — Insights: what stands out

Screenshot: 09-insights-findings.png

Timing: ~13 seconds

Screenshot: 09-insights-findings.png — Insights, further down: the ranked “What stands out” findings, each saying how sure it is.

WHAT IS ON SCREEN

A “Compare groups by” switch (Subjects, Classes, Teachers, Grades). “What stands out 7”. Finding 1, Achievement, marked Strong evidence: “Achievement sits above the national middle”, 65th median percentile, 58% at or above the 61st, and a dot plot against the US 50th. Finding 2, Growth, Strong evidence: “Growth is running above typical”, median growth percentile 55, 61% of students grew more than typical. Each card ends with a “How sure” line: students, test, p-value and 95% range (demo data).

WHAT IT TELLS A TEACHER

Findings are ranked by the strength of the evidence and say how many students they rest on, so a teacher knows which patterns are solid and which could be chance. The page describes; it never claims to explain why.

WHAT TO SAY (NARRATION)

Below, Insights ranks what stands out, strongest evidence first. Each finding says how many students it rests on and how sure it is. It describes the pattern, and never guesses at the cause.

TEACHER ACTION / TIP

Take the top two findings into your data meeting, and use Compare groups by to see whether a gap sits between subjects, classes, teachers or grades.

Timing: ~13 seconds

SCENE 10 OF 43 · ESSENTIALS

SCENE 10 — Class Snapshot

Screenshot: 10-class-snapshot.png

Timing: ~12 seconds

Screenshot: 10-class-snapshot.png — Class Snapshot: the headline counts and shares in one row.

WHAT IS ON SCREEN

Eight tiles (demo data): Records 360 (90 students); Met growth 57% of 354 records; Exceeded 55%; Avg start %ile 59.7; Avg end %ile 62.5; Gap closure 19%, pooled across 168 results below the benchmark; Priority 182; Celebration 196. An Export Summary TXT button top right.

WHAT IT TELLS A TEACHER

The one-minute summary for a data meeting.

WHAT TO SAY (NARRATION)

The Class Snapshot is the one-minute version. In the sample, 57 percent of records met growth. And the group closed 19 percent of its distance to the secure line.

TEACHER ACTION / TIP

Any share resting on fewer than 10 records prints as a count instead of a percentage, so a handful of students is never made to look like a rate.

Timing: ~12 seconds

SCENE 11 — Achievement Profile (tiers)

Screenshot: 11-achievement-profile.png

Timing: ~11 seconds

Screenshot: 11-achievement-profile.png — Achievement Profile: the five instructional tiers, with counts and names.

WHAT IS ON SCREEN

Three explanation cards (What tiers do and do not say, What you can plan from, What to do next). Then INSTRUCTIONAL TIERS: coloured rows from Intensive (Tier 3, at or below the 20th percentile) through Strategic, On Track and Secure to Advanced (81st percentile and above), each with a bar, a count and share (demo data: 36, 49, 67, 81 and 127 records) and the first names in it.

WHAT IT TELLS A TEACHER

How many records sit in each tier now, which sizes intervention and extension groups. Tiers describe achievement only: where a student is, not how far they moved.

WHAT TO SAY (NARRATION)

The Achievement Profile sorts every record into five tiers, from Intensive to Advanced. Each row shows how many, and who. Click one to filter the whole page.

TEACHER ACTION / TIP

Use the counts to size intervention and extension groups before the timetable is fixed.

Timing: ~11 seconds

SCENE 12 OF 43 · FULL ANALYSIS

SCENE 12 — Subject Overview

Screenshot: 12-subject-overview.png

Timing: ~7 seconds

Screenshot: 12-subject-overview.png — Subject Overview: one card of key figures per subject.

WHAT IS ON SCREEN

Four cards, Language, Reading, Mathematics and Science, each listing met growth, exceeded, average start and end RIT, RIT change, start and end percentile, median CGP, pooled gap closure, distance from the US norm, and records that moved up or down a band. Demo data: Reading met growth 63%; Mathematics 52%, with an average percentile change of -2.2.

WHAT IT TELLS A TEACHER

Which subject needs attention first. The Overview Lens under More filters turns it into one card per class instead.

WHAT TO SAY (NARRATION)

Subject Overview gives one card per subject. In the sample, Reading is strongest. Mathematics trails behind.

TEACHER ACTION / TIP

A card that shows a count instead of a percentage rests on fewer than 10 records: read it as a description, not a finding.

Timing: ~7 seconds

SCENE 14 OF 43 · FULL ANALYSIS

SCENE 14 — Distributions

Screenshot: 14-distributions.png

Timing: ~10 seconds

Screenshot: 14-distributions.png — Distributions: every record as a dot over a box plot, one row per subject.

WHAT IS ON SCREEN

A Measure switch: Current percentile, Current RIT, RIT change, Growth percentile (CGP). One row per subject: every record a dot in its band colour over a grey box for the middle half, a thick median line and a diamond for the mean, on faint Red-to-Blue band stripes with dashed lines at the 50th and the 61st (“secure”). The summary line reads: highest median Science (69), lowest Mathematics (59), widest middle half Mathematics, spanning 50 points (demo data).

WHAT IT TELLS A TEACHER

The shape of the group, not just its average: a wide box is a spread-out group that one lesson pitched at the middle will not reach.

WHAT TO SAY (NARRATION)

Distributions shows every record as a dot. You see the shape of the class, not just its average. Mathematics is the most spread out.

TEACHER ACTION / TIP

Switch the measure to RIT change or growth percentile to see the shape of growth instead of achievement.

Timing: ~10 seconds

SCENE 15 OF 43 · ESSENTIALS

SCENE 15 — Growth and Achievement: the quadrants

Screenshot: 15-growth-and-achievement.png

Timing: ~14 seconds

Growth and Achievement

Uses NWEA growth/achievement quadrants when present, with an overall view and a subject breakdown.

What the quadrants mean

NWEA reports three levels on each axis, not two, and this dashboard keeps all three. A student scored average growth and average achievement is on track — not low on both, which is what folding average in with low would say about them.

Why this matters

This separates achievement from growth, so a lower-scoring student with strong growth is not treated the same as a lower-scoring student with low growth.

How to read movement

Improved, declined, and stayed same compare
StartGrowthandAchievement to EndGrowthandAchievement for the same student-subject record.

OVERALL

HI-G/Hi-A 114 32% of records with quadrant data	HI-G/Avg-A 26 7% of records with quadrant data	HI-G/Lo-A 26 7% of records with quadrant data	Avg-G/Hi-A 37 10% of records with quadrant data
Avg-G/Avg-A 14 4% of records with quadrant data	Avg-G/Lo-A 10 3% of records with quadrant data	Lo-G/Hi-A 52 15% of records with quadrant data	Lo-G/Avg-A 27 8% of records with quadrant data
Lo-G/Lo-A 48 14% of records with quadrant data			

Quadrant movement: 55 improved, 31 declined, 268 stayed the same, 0 traded one axis for the other, 6 missing. A trade-off is not ranked: growth rose while achievement fell, or the reverse.

Screenshot: 15-growth-and-achievement.png — Growth and Achievement: NWEA’s growth and achievement quadrants for the whole view.

WHAT IS ON SCREEN

Three explanation cards (What the quadrants mean, Why this matters, How to read movement).
OVERALL: nine quadrant cards (demo data), from Hi-G/Hi-A 114 (32% of records with quadrant data) to Lo-G/Lo-A 48 (14%), including Lo-G/Hi-A 52 (15%) and Hi-G/Lo-A 26 (7%). The note below: quadrant movement 55 improved, 31 declined, 268 stayed the same.

WHAT IT TELLS A TEACHER

It separates where a score sits (achievement) from how far it moved compared with students who started in the same place (growth). High achievement can hide low growth, and a low start can hide strong growth.

WHAT TO SAY (NARRATION)

Growth and Achievement separates where students are from how fast they are moving. Watch the high achievers with low growth: 52 records in the sample. And protect the low starters who are catching up.

TEACHER ACTION / TIP

Look for two patterns first: secure students who are coasting, and low starters whose catch-up growth is working and needs protecting.

Timing: ~14 seconds

SCENE 16 OF 43 · ESSENTIALS

SCENE 16 — Growth and Achievement: by subject

Screenshot: 16-growth-quadrant-maps.png

Timing: ~10 seconds

Screenshot: 16-growth-quadrant-maps.png — Growth and Achievement, by subject: the three-by-three quadrant maps for Language and Reading.

WHAT IS ON SCREEN

BY SUBJECT: for Language (90 records, 89 with quadrant data) and Reading, a three-by-three grid with achievement from low to high across the columns and growth from high (top row) to low (bottom row). Each cell holds a count, a share and a plain-language read (demo data), such as High Growth / Low Achievement 7, “Catch-up growth is working”; Low Growth / Low Achievement 13, “Highest priority for support”; Low Growth / High Achievement 14, “Achievement is strong; restart growth”.

WHAT IT TELLS A TEACHER

The same quadrants for each subject, with a one-line teaching read in every cell.

WHAT TO SAY (NARRATION)

The quadrants are drawn for every subject too. Each cell says what it means in plain words. For example: catch-up growth is working.

TEACHER ACTION / TIP

Protect what is working; think twice before moving a fast-growing low starter out of the support that is producing the growth.

Timing: ~10 seconds

SCENE 17 OF 43 · FULL ANALYSIS

SCENE 17 — Movement

Screenshot: 17-movement.png

Timing: ~10 seconds

Screenshot: 17-movement.png — Movement: band-to-band movement, the start-to-end band matrix and who moved down.

WHAT IS ON SCREEN

Four tiles (demo data): Moved up a band 26% (93 of 354), Stayed in band 56% (197), Moved down a band 18% (64), Median percentile change +1 pt, and a paragraph reading them. Left: the transition matrix, rows the Fall 2025 band and columns the Spring 2026 band, each cell a count and share, the diagonal outlined. Right: “Who is in it: Moved down a band”, students with their start and end band and percentile, for example Green 73rd to Orange 38th, -35.

WHAT IT TELLS A TEACHER

Of the students who started in each band, where they ended up, and exactly who slipped.

WHAT TO SAY (NARRATION)

Movement shows where each record started and ended. In the sample, 26 percent moved up a band. The list on the right names who slipped.

TEACHER ACTION / TIP

Start with the records that slipped a band. Click any cell to list its students, and remember a change of a few points can be measurement error.

Timing: ~10 seconds

SCENE 18 — Gap Closure

Screenshot: 18-gap-closure.png

Timing: ~10 seconds

Gap Closure

Export Gap CSV?

Secure benchmark: 61st percentile. Overall cards are followed by subject-level gap patterns.

For students below 61

Gap closure measures how much of the distance to the secure benchmark was closed from start to end percentile.

For students at 61+

The dashboard checks whether secure students extended, maintained, regressed, or dropped below the secure benchmark.

Band movement

Moved up or moved down compares the start and end percentile color bands for each student-subject record.

How to read the number

The 61st percentile is a locally chosen “secure” line, not an NWEA definition. Gap closure counts percentile-rank points, which are positions in a distribution rather than equal-sized units, so a ten-point move near the middle of the scale is a larger change in RIT than a ten-point move near either end. Read it as direction and rough magnitude, not as a precise quantity.

OVERALL

Closed the gap

Secure but slipping

53%

Among students who started at 61+

Screenshot: 18-gap-closure.png — Gap Closure: movement towards the 61st-percentile secure line.

WHAT IS ON SCREEN

Four explanation cards, including “How to read the number”: the 61st percentile is a locally chosen secure line, not an NWEA definition. OVERALL cards (demo data): Closed the gap 21%, Reduced the gap 41%, Widened the gap 35%, Gap Closure (pooled) 19%, Moved up a band 26%, Moved down a band 18%, Secure and extending 40%, Secure but slipping 53%.

WHAT IT TELLS A TEACHER

Among students who started below the secure line: how many closed, reduced or widened the gap. And whether students who started secure extended or slipped.

WHAT TO SAY (NARRATION)

Gap Closure follows students who started below the 61st percentile. Most closed or reduced the gap. But over half of the secure starters slipped.

TEACHER ACTION / TIP

Celebrate the closers by name, and look first at the secure students who slipped.

Screenshot: 22-cross-subject.png — Cross-Subject Profiles: each student’s strongest and weakest subject.

WHAT IS ON SCREEN

Tiles (demo data): Students with 2+ subjects 90, Uneven achievement 54 (30+ percentile points between strongest and weakest), Uneven growth 60, Widest spread 79, Median spread 37. A table: student, strongest subject with band and percentile, weakest subject, achievement and growth spread, coloured subject dots, and “What it means”, for example “Group this student differently in Mathematics than in Science.”

WHAT IT TELLS A TEACHER

Students whose subjects disagree need different grouping in each block, not one label for the whole day.

WHAT TO SAY (NARRATION)

Cross-Subject Profiles compares each student’s subjects. A student can be Blue in one and Red in another. Group them differently in each.

TEACHER ACTION / TIP

Use it when you group: one label rarely fits a student across the whole day.

Timing: ~9 seconds

SCENE 23 — Heatmap: groups by subject

Screenshot: 23-heatmap.png

Timing: ~14 seconds

Screenshot: 23-heatmap.png — Heatmap: every class against every subject, coloured by median percentile.

WHAT IS ON SCREEN

A Rows switch (Class, Teacher, Grade) and a Colour by switch (Median %ile, 61st+ share, Met projection, Median CGP, RIT change). The grid: rows 5A, 5B, 6A, 6B and All classes; columns Language, Reading, Mathematics, Science and All subjects; each cell shaded in one of five purple steps (darker is higher) and showing its value and n. The line below: lowest 5B in Mathematics (46.5), highest 6A in Language (84) (demo data).

WHAT IT TELLS A TEACHER

The cell that needs a conversation stands out before anyone reads a number.

WHAT TO SAY (NARRATION)

The Heatmap puts every class against every subject: the darker the purple, the higher the median. The lowest cell, 5B in Mathematics, is the one to talk about. It is a question, not a verdict.

TEACHER ACTION / TIP

A difference between two cells is a question, not a verdict: ask what is different about that group before deciding it is the teaching.

Timing: ~14 seconds

Class Summary Report

Copy-ready text for planning or PLC notes.

RegenerateCopyExport TXT?

This class view includes 360 student-subject records covering Fall 2025 to Spring 2026. Across the 354 records that carry both windows, the group began with an average percentile of 59.7 and ended with 62.5. Overall, 57% of records met growth and 55% of records exceeded projected growth. The 168 results (one per student and subject) that began below the secure benchmark closed 19% of the total distance to the 61st percentile. Compared with US norms by grade and season, the class averaged +6.8 RIT from benchmark, with 71% of records at or above norm, and moved +1.4 RIT relative to those norms across the two windows.

Growth was strongest in Reading, while Mathematics requires the most targeted support. 93 records moved up at least one percentile band, while 64 moved down.

Key intervention groups are Intensive Support: 27; Targeted Support: 41; Watch Group: 1; Secure but Regressing: 99. Key enrichment and extension groups are Enrichment: 123; Catch-Up Growth: 63; Secure / Maintain: 2. Low starters showing strong catch-up growth: 55. Low starters needing urgent support: 30. Secure starters showing strong extension: 83. Secure

Screenshot: 26-class-summary.png — Class Summary Report: a copy-ready narrative of the current view.

WHAT IS ON SCREEN

A text box holding the written summary, beginning “This class view includes 360 student-subject records covering Fall 2025 to Spring 2026...”, then paragraphs on growth by subject and the key intervention groups (demo data). Regenerate, Copy and Export TXT buttons top right.

WHAT IT TELLS A TEACHER

The narrative for PLC notes or a report to a leader, written from the same figures as the cards.

WHAT TO SAY (NARRATION)

The Class Summary Report writes the paragraph for you. Edit it into your own voice. Then paste it into your PLC notes.

TEACHER ACTION / TIP

Edit it into your own voice before you share it.

CORRELATION

-0.14

Pearson r · weak negative · p = 0.011

R²

0.02

The line accounts for 2% of the spread in CGP

RECORDS

354

89 students · 6 missing a measure, left out

SLOPE

-0.13

CGP per 1 Start %ile · 95% CI -0.24 to -0.03

TREND LINE

CGP = 63.6 - 0.13 × Start %ile

Weak negative relationship: records with a higher start percentile tend to have a lower conditional growth percentile (CGP). It describes this group; it does not show that one causes the other.

Select a point to pin that student: their other subjects stay lit, the rest step back, and their figures appear here. Escape clears it.

Conditional growth is already measured against students who started at the same score, so NWEA expects no slope here: a clear one means growth in this group differed by starting point.

Each student counts once per subject, so the points are not all independent and the p-value is on the generous side.

Screenshot: 27-explorer.png — Explorer: any two measures plotted against each other, with a trend line and plain-English figures.

WHAT IS ON SCREEN

Controls: Across (X) Start percentile, Up (Y) Conditional growth percentile (CGP), Colour by Subject, a subject switch, Show Trend line, and Pin a student. A scatter of 354 points coloured by subject with a trend line and shaded band. On the right (demo data): Correlation -0.14 (weak negative, p = 0.011), R² 0.02, Records 354, Slope -0.13, and a read that ends “It describes this group; it does not show that one causes the other.”

WHAT IT TELLS A TEACHER

Whether two measures move together in this group, and how strongly, stated honestly and never as a cause.

WHAT TO SAY (NARRATION)

Explorer plots any two measures, with a trend line. It says how strong a relationship is. It never claims a cause.

TEACHER ACTION / TIP

Look for the points far from the line, such as a student growing well beyond what their start predicts.

Timing: ~9 seconds

SCENE 28 — Table Groups and Seating Plan

Screenshot: 28-table-groups.png

Timing: ~10 seconds

Screenshot: 28-table-groups.png — Table Groups and Seating Plan: groups built from the data and drawn as a room (filtered to class 5A).

WHAT IS ON SCREEN

Filtered to class 5A (demo data). The heading line: 23 of 23 students seated at 5 tables, balanced mixed tables by end percentile. The “Open the seating planner” bar with its Open button. “How this plan was made” explains the snake deal round the tables. Below, the room drawn on a grid: the teacher desk, the board and Tables 1 to 4 (Table 5 and the door are further down), each seat a name card in the student’s band colour with CGP and percentile, and a band-colour strip on every table. Print teacher copy, Print wall plan and Export CSV buttons.

WHAT IT TELLS A TEACHER

Seating groups from the data in seconds, balanced mixed tables or similar-score skill groups, with the method spelled out.

WHAT TO SAY (NARRATION)

Table Groups builds seating groups from the data, here for class 5A. It explains how the plan was made. Colour strips show each table’s mix.

TEACHER ACTION / TIP

A seating plan is for one room: pick one class first; the page offers each class as a one-click button.

Timing: ~10 seconds

Screenshot: 31-priority-students.png — Priority Students: the records that need attention first, with the reasons.

WHAT IS ON SCREEN

182 records (demo data). Columns: Student, Subject, Priority reason (for example “Did not meet growth; Low growth and low achievement at end; Negative observed growth; Finished below the 21st percentile; Widened the gap”), Action, Suggested group (Intensive Support, Secure but Regressing, Targeted Support, Catch-Up Growth), Gap status, End %ile, RIT change and US norm grade level. An Export Priority CSV button.

WHAT IT TELLS A TEACHER

Where the first small groups come from. The reason matters more than the tier: a student can be listed for slipping, not only for a low score.

WHAT TO SAY (NARRATION)

Priority Students lists who needs attention first, and always says why: missed growth, a dropped band, a widened gap. Some are high achievers who slipped, not just low scorers.

TEACHER ACTION / TIP

Name three students and what changes for them this week, before anyone asks.

Timing: ~12 seconds

SCENE 32 OF 43 · ESSENTIALS

SCENE 32 — Wall Posters

Screenshot: 32-wall-posters.png

Timing: ~13 seconds

Whole class, every subject together

90 students | 11 posters

☐ Select all in this section

☐ **We grew this year**
The share of the class who met or beat the growth NWEA projected for them.

Print this one

☐ **Where we are now**
The class spread across the five NWEA colour bands, as counts rather than names.

Print this one

☐ **Our learning areas**
The strand the class is strongest in and the one to work on next, from the Class Profile export.

Print this one

☐ **The RIT ladder**
What a year of growth looks like on the RIT scale, from where the class is now.

Print this one

☐ **Growth is measured fairly**
Median conditional growth by starting band, showing that growth is judged against a fair comparison.

Print this one

☐ **Take your time**
Median test length and the number of tests that were rushed, as a case for slowing down.

Print this one

☐ **Our next milestone**
How many more results the class needs above the chosen line to reach its target.

Print this one

☐ **Catching up**
Of the results that started below the class benchmark, how many moved towards it or crossed it.

Print this one

Screenshot: 32-wall-posters.png — Wall Posters: student-friendly class posters, previewed before printing.

WHAT IS ON SCREEN

The previews in the section “Whole class, every subject together, 90 students, 11 posters” (demo data): We grew this year, Where we are now, Our learning areas, The RIT ladder, Growth is measured fairly, Take your time, Our next milestone, Catching up. Each has a tick box, a one-line description, a preview of the purple-headed poster and a “Print this one” button.

WHAT IT TELLS A TEACHER

Posters for the classroom wall in student language: class shares, medians and counts only, with no name, no individual score and no rank.

WHAT TO SAY (NARRATION)

Wall Posters turn the data into something for your students, in student language. They show class figures only: no names, no individual scores, no ranks. Tick the ones you want, and print.

TEACHER ACTION / TIP

Filter to one class first and put the class name the students know in the poster heading box; in the print dialog, turn on background graphics and fit to page.

Timing: ~13 seconds

SCENE 33 — Check My Understanding (quiz)

Screenshot: 33-quiz.png

Timing: ~13 seconds

Check My Understanding

Start over

?

The questions a principal, inspector or governor is likely to ask about this data, with every answer worked out from the records currently in view. A practice run before the real conversation.

Question 1 of 12

0 of 1 answered correctly

GOVERNOR ASKS

Snapshot

How many students are in this view? A student tested in two subjects is two records, and I want students, not records.

A 89 X

B 360

C 87

D 90 ✓

Not quite. The answer is 90.

90 students across 360 student-subject records. Class Snapshot shows one number with the other as its hint: a student appears once per subject, so records always run ahead of students, and every figure on this page that says records is not a count of students.

Likely follow-up: Give me both numbers for your support list, records and students, and tell me which student is on it in two subjects.

Next question

Show me: Class Snapshot

Screenshot: 33-quiz.png — Check My Understanding: practice questions for a data conversation, marked against the page.

WHAT IS ON SCREEN

Question 1 of 12 with a gold progress bar and “0 of 1 answered correctly”. Tags: Governor asks, Snapshot. The question: “How many students are in this view? A student tested in two subjects is two records, and I want students, not records.” Four answers: A 89 is marked wrong in red, D 90 is marked correct in green (B 360 and C 87 are the other options). Then “Not quite. The answer is 90.” with the explanation that 90 students make 360 student-subject records, a “Likely follow-up” box, and the Next question and “Show me: Class Snapshot” buttons (demo data).

WHAT IT TELLS A TEACHER

A rehearsal for the questions a principal, inspector or governor is likely to ask, with every answer worked out from the records in view.

WHAT TO SAY (NARRATION)

Check My Understanding is a practice run for a data meeting. It asks what a principal, inspector or governor would ask, and marks your answer. Then it shows you where the evidence is.

TEACHER ACTION / TIP

Filter to the class the meeting is about, run a set, and copy the prep notes.

Timing: ~13 seconds

Your file never leaves your computer.

ISSUES TO REVIEW

6

Files combined

sample-asg.csv, sample-class-profile.csv. They were read as one data set. A Class Profile export is one file per test, so loading them together is how you get every subject in one view.

Records combined across files

358 student-subject record(s) appeared in more than one file describing the same test. They were folded into one record rather than counted twice, so growth from an ASG export and the instructional areas from a Class Profile export sit on the same student.

NWEA projection for the window ahead

2 record(s) carry NWEA's projected growth and projected RIT for a window that has not been tested yet. This export carries NWEA's own projection for the window ahead: the growth it expects this student to make, and the RIT that follows from it. It is conditioned on the student's own starting score and grade rather than on a class-level norm mean, and it is the figure the next export will score "met growth" against – so it leads here. The norm-referenced targets stay beside it, because a projection describes typical progress from where a student is, not the distance to grade level.

Instructional areas found

358 record(s) carry instructional area scores, so the Areas section is available. An instructional area RIT rests on a fraction of the items behind the overall RIT, and NWEA publishes no percentile or norm for one. Every area figure here is the difference from the same student's own overall RIT on the same test.

Screenshot: 35-data-check.png — Data Check: what was read from the files, and anything worth confirming.

WHAT IS ON SCREEN

Tiles (demo data): Rows read 718 (77 columns, comma separated), Records with a score 360, No score in window 0, Suppressed cells 0, Short tests 2, Invalid tests removed n/a, Rapid guessing 4, Records set aside 0, No grade recorded 0, Issues to review 6. Notes: Files combined (sample-asg.csv, sample-class-profile.csv), Records combined across files (358), NWEA projection for the window ahead, Instructional areas found.

WHAT IT TELLS A TEACHER

The section to read first: students with no score, tests that were short or rushed, and whether the files match what the page expects.

WHAT TO SAY (NARRATION)

Data Check is the section to read first. It shows what was read and combined. And it flags what to confirm, like short tests.

TEACHER ACTION / TIP

Chase the students with no score and confirm short tests before a placement decision.

Timing: ~10 seconds

SCENE 36 — Every section explains itself

Screenshot: 36-section-help.png

Timing: ~12 seconds

Growth Goals

Export Goal Sheet CSV

Print Goal Sheets

Norm-referenced RIT targets for the next reporting window, alongside the growth already achieved.

WHAT IT SHOWS

Norm-referenced RIT targets for the next reporting point: the typical gain a peer makes, a keep-pace target, the grade-level target and the stretch above typical some students need. Where a fall export carries NWEA's own projection, that figure leads.

HOW TO READ IT

Keep pace means holding your relative position; grade level means reaching the norm mean. Typical gain comes from the difference between two norm means, not from NWEA's projection for an individual student. The norm table built in is a reference, not the official study.

WHAT TO DO WITH IT

Print the goal sheets, set a written target for every student who needs above-typical growth, and re-upload after the next window so the target becomes a result.

More on every section, with pictures, in the user guide: [Download the guide \(PDF\)](#) [Close](#)

Screenshot: 36-section-help.png — Every section's ? button opens a three-part explanation in place (Growth Goals shown).

WHAT IS ON SCREEN

The purple ? button at the top right of Growth Goals is pressed, opening a lilac panel with three columns, What it shows, How to read it and What to do with it, then "Download the guide (PDF)" and Close. The section's tiles and table continue below.

WHAT IT TELLS A TEACHER

No statistics training is needed: every section explains itself in three short answers.

WHAT TO SAY (NARRATION)

You never have to guess what a section means. Every section has a question-mark button. It opens three short answers: what it shows, how to read it, and what to do.

TEACHER ACTION / TIP

When a figure surprises you, open the ? before drawing a conclusion.

Timing: ~12 seconds

SCENE 37 — A student's spotlight

Screenshot: 37-student-spotlight.png

Timing: ~12 seconds

WHAT IS ON SCREEN

The spotlight popup for the fictional student Aarav Sharma (ID, grade 6, class 6A, teacher, and the tier badge Strategic). A green STRENGTHS box (for example Reading: exceeded projected growth, moved up a band) and an orange WATCH box (Mathematics: did not meet growth, negative observed growth, finished below the 21st percentile). Then one card per subject, Reading and Language in view: Reading RIT 186 to 202, +16, percentile 9 to 28, met growth Yes, conditional growth percentile 89, a “Spring of grade 7 target”, and a bar for each instructional area against his own overall RIT (demo data).

WHAT IT TELLS A TEACHER

Everything about one student on one page, ready for a parent conference or a conversation with the student.

WHAT TO SAY (NARRATION)

Click any student’s name to open their spotlight. Every subject is together: strengths in green, things to watch in orange, and a target for next year in each subject.

TEACHER ACTION / TIP

At the foot of the spotlight, Copy conference notes and Print one-pager get you ready for a parent or student conference.

Timing: ~12 seconds

Screenshot: 37-student-spotlight.png — A student’s spotlight: one (fictional) student across all their subjects, in a popup over the page.

Every part of this subject is within 8 RIT of my overall score, so my practice is across the whole subject.

Science

233 now

233 by spring of grade 6

hold my ground

Every part of this subject is within 8 RIT of my overall score, so my practice is across the whole subject.

THE GOAL I AM SETTING MYSELF

One thing I want to be able to do by then, in my own words:

WHAT I WILL DO TO GET THERE

The practice and the habits: what I will do, when, and how often. Start with the part named above.

HOW MY TEACHER WILL HELP

Me

My teacher

Date

Screenshot: 38-goal-sheet-print.png — The printed goal sheets, as the print window shows them (fictional student).

WHAT IS ON SCREEN

Two A4 pages side by side for the fictional student Nils Andersson, grade 5, class 5A. Page 1, “My learning goals”: a purple header with the AISA mark, “Where I am now” with each subject’s RIT and band and “My next step by spring of grade 6”, then “What is inside each subject”, a bar per instructional area. Page 2, “My plan”: the targets and the part to work on first, ruled space for “The goal I am setting myself”, “What I will do to get there” and “How my teacher will help”, and lines for Me, My teacher and Date.

WHAT IT TELLS A TEACHER

A student-facing goal-setting sheet, two pages per student, made in one click from Growth Goals.

WHAT TO SAY (NARRATION)

Here is a printed goal sheet. Page one shows the student where they are and their next step. Page two is theirs to fill in: their goal, their plan, and how you will help.

TEACHER ACTION / TIP

Use them in student conferences, and keep them to revisit after the next test.

Timing: ~14 seconds

Your file never leaves your computer.

Page 42 of 50

SCENE 39 — A fall file: the page adapts

Screenshot: 39-fall-baseline.png

Timing: ~15 seconds

Screenshot: 39-fall-baseline.png — A fall file with one test window: the orange “Baseline file” banner and the page adapted to it.

WHAT IS ON SCREEN

A single-window version of the sample (demo data), fall-2025-asg.csv: 356 records, 89 students. The question chips change to Where are we starting?, Who needs support?, What are the targets?, How do I group them?, Can I explain this data? An orange BASELINE FILE banner: “Fall 2025 baseline - one test window. No prior window to compare against, so growth, gap closure and quadrant movement are not shown...”. The Jump to bar now has Support List and Strengths, and no Growth, Movement or Gap Closure.

WHAT IT TELLS A TEACHER

In September, with only one test, the page switches to a start-of-year view instead of showing empty growth panels.

WHAT TO SAY (NARRATION)

In September you only have the fall test, and the page adapts. The banner turns orange, and growth panels are hidden rather than left empty. The questions become: where are we starting, and what are the targets?

TEACHER ACTION / TIP

Upload in the fall to set targets; upload again in winter or spring to see growth against them.

Timing: ~15 seconds

SCENE 40 — Starting Point on a fall file

Screenshot: 40-fall-starting-point.png

Timing: ~10 seconds

Screenshot: 40-fall-starting-point.png — Starting Point on a fall file: tiers and placement against US norms from one test window.

WHAT IS ON SCREEN

Starting Point: “Where this group is beginning, from the Fall 2025 window.” Cards: Why there is no growth here, What you can plan from, What to do next. The fall tier ladder (demo data): Intensive 44, Strategic 54, On Track 71, Secure 70, Advanced 117. Below, PLACEMENT AGAINST US NORMS: Mean RIT vs norm +5.4, At or above norm 66%, Testing a grade+ below 98, Testing a grade+ above 96, Median RIT 211.

WHAT IT TELLS A TEACHER

What can be planned from one test: tiers, placement against the US grade and season norms, approximate grade-level equivalence, and targets for the year.

WHAT TO SAY (NARRATION)

Starting Point shows the tiers and placement against US norms. Size your groups and set targets now. The spring upload measures against them.

TEACHER ACTION / TIP

Grade-level equivalence is an approximation from grade means, not a reading or maths grade level.

Timing: ~10 seconds

SCENE 41 OF 43 · OTHER SITUATIONS

SCENE 41 — Dark mode

Screenshot: 41-dark-mode.png

Timing: ~8 seconds

Screenshot: 41-dark-mode.png — Dark mode: the masthead and Insights in the dark theme.

WHAT IS ON SCREEN

Top: the masthead, file stats, green Growth file banner and filters on a deep purple-black background, with a “Light” button top right. Bottom: Insights, its six tiles in lavender on dark cards (demo data).

WHAT IT TELLS A TEACHER

A comfortable dark theme for evening planning, remembered for next time.

WHAT TO SAY (NARRATION)

There is a dark theme for evening planning. One click in the header switches it. The page remembers your choice.

TEACHER ACTION / TIP

Theme, motion and view are the kind of things the page remembers: preferences, never student data.

Timing: ~8 seconds

SCENE 42 — On a phone

Screenshot: 42-phone-view.png

Timing: ~9 seconds

Screenshot: 42-phone-view.png — On a phone (390 pixels wide): the same dashboard, stacked into one column.

WHAT IS ON SCREEN

Three phone-width screens: the top of the page with the stacked masthead, question chips, file stats, the Growth file banner and the filters; Insights with its tiles two to a row under the Jump to bar; Priority Students with its table scrolling sideways (demo data).

WHAT IT TELLS A TEACHER

The page works on a phone or tablet too, for a quick look between lessons or in a meeting.

WHAT TO SAY (NARRATION)

It works on a phone or tablet too. The layout stacks into one column. And it all still runs on the device.

TEACHER ACTION / TIP

For printing, grouping and the seating planner, a laptop screen is more comfortable.

Timing: ~9 seconds

The promise that makes it safe to use with real student data.

WHAT TO SAY (NARRATION)
Most important of all: your students’ data never leaves your computer. Nothing is uploaded, nothing is loaded from the internet, there is no sign-in, and it works offline. Export your files, drop them in, and start planning.

TEACHER ACTION / TIP
Try it first with Load Sample Data, then with your own class. Every section’s ? and the user guide are there when you need them.
Timing: ~15 seconds

Screenshot: 43-privacy-offline.png — Closing: the upload panel and its privacy promise.

Glossary

RIT score

NWEA's equal-interval scale (student scores typically fall between about 140 and 300) that runs through every year of school without restarting. Growth is measured in RIT points; it is the number to quote when talking about progress.

Percentile

Where a RIT score sits against students in the same grade, subject and season in NWEA's US norms, from 1 to 99; 50 is the national middle. It is not the share of questions answered correctly.

Achievement bands (Red, Orange, Yellow, Green, Blue)

The five achievement quintiles, each 20 percentile points wide (NWEA's Low, Low Average, Average, High Average and High), which the page names by colour: Red 1st–20th, Orange 21st–40th, Yellow 41st–60th, Green 61st–80th, Blue 81st–99th. The page always shows them in these colours. A band is where a student is today, not a label.

Instructional tiers

The same cut points used for planning: Intensive (Tier 3, at or below the 20th percentile), Strategic (Tier 2, 21st–40th), On Track (Tier 1, 41st–60th), Secure (Tier 1, 61st–80th), Advanced (Extend, 81st and above).

Secure benchmark (61st percentile)

A locally chosen line for “secure”, not an NWEA definition. Gap closure measures movement towards or past it among students who started below it.

Projected growth

NWEA's projection, from a student's own starting RIT and grade, of how much a typical peer grows between the two test windows.

Observed growth / RIT change

How many RIT points the student actually moved between the two windows.

Met projection (met growth)

Observed growth was at least the projection; “exceeded” means more. Where the export carries a standard error, a result within measurement error of the projection is marked “too close to call”.

Conditional growth percentile (CGP)

A student's growth ranked, from 1 to 99, against students nationally who started at the same RIT in the same grade and subject. 50 is typical growth from that start, so it is fair to low and high starters alike.

Growth and achievement quadrants

NWEA's grid of growth (low, average, high) against achievement (low, average, high), e.g. Hi-G/Lo-A: high growth from a low start.

Instructional areas

The strands inside a subject (for example Geometry or Vocabulary), from the Class Profile export. The page reads each area against the student's own overall RIT, because NWEA publishes no norm for an area.

ASG export

The Achievement Status and Growth report, downloaded from MAP Reports as CSV. It carries start and end scores, projections and growth.

Class Profile export

Downloaded from MAP Reports as CSV, one file per subject. It carries the instructional-area scores. Load it with the ASG file and the page folds each student's records into one.

Record

One student in one subject. A student tested in four subjects is four records.

Counts instead of percentages

Any share resting on fewer than 10 records prints as a count (for example “3 of 4”), because a percentage of a handful of students is misleading.

Growth, mixed and baseline files

Growth: two test windows. Mixed: two windows, but a meaningful share of records has only the current one. Baseline: one window (a fall upload), where growth panels are hidden and a start-of-year view appears.

Essentials

The nine sections the page opens on. The other sections appear with More analysis, and the choice is remembered.

Screenshot index

ID	FILE NAME	SCENE	WHAT THE SCREENSHOT SHOWS	TIME
01	01-landing.png	The landing page	The dashboard as it opens, before any file is loaded: the purple masthead with the AISA seal and the Load MAP Data panel.	17s
02	02-getting-started.png	The Getting Started card	The Getting Started card under the upload panel: three steps from NWEA export to a plan.	12s
03	03-export-steps.png	How do I get this file? The NWEA export steps	“How do I get this file?” opens the NWEA export steps and what the tool reads.	13s
04	04-sample-loaded.png	Sample data loaded	After Load Sample Data: the one-line masthead, the file stats and the green “Growth file” banner.	14s
05	05-filters-and-jump-to.png	Filters and the Jump to bar	The filter bar with More filters open, and the Jump to bar as the page opens.	12s
06	06-essentials-vs-full.png	Essentials or the full analysis	Essentials versus the full analysis: the Jump to bar in both states, and the More analysis card between them.	11s
07	07-briefing.png	Spoken Briefing	Spoken Briefing: a narrated walk through the file, read aloud by the teacher’s own device.	14s
08	08-insights.png	Insights: the headline numbers	Insights: six headline tiles, each set against a national reference.	14s
09	09-insights-findings.png	Insights: what stands out	Insights, further down: the ranked “What stands out” findings, each saying how sure it is.	13s
10	10-class-snapshot.png	Class Snapshot	Class Snapshot: the headline counts and shares in one row.	12s
11	11-achievement-profile.png	Achievement Profile (tiers)	Achievement Profile: the five instructional tiers, with counts and names.	11s
12	12-subject-overview.png	Subject Overview	Subject Overview: one card of key figures per subject.	7s
13	13-subject-charts.png	Subject Charts	Subject Charts for Language: the same figures as pictures, repeated for every subject.	10s
14	14-distributions.png	Distributions	Distributions: every record as a dot over a box plot, one row per subject.	10s
15	15-growth-and-achievement.png	Growth and Achievement: the quadrants	Growth and Achievement: NWEA’s growth and achievement quadrants for the whole view.	14s
16	16-growth-quadrant-maps.png	Growth and Achievement: by subject	Growth and Achievement, by subject: the three-by-three quadrant maps for Language and Reading.	10s
17	17-movement.png	Movement	Movement: band-to-band movement, the start-to-end band matrix and who moved down.	10s
18	18-gap-closure.png	Gap Closure	Gap Closure: movement towards the 61st-percentile secure line.	10s
19	19-growth-goals.png	Growth Goals	Growth Goals: RIT targets for the next test, and the Print Goal Sheets button.	12s
20	20-action-board.png	Action Board	Action Board: this week’s highest-leverage moves, with the students named.	12s
21	21-what-would-it-take.png	What Would It Take? (targets)	What Would It Take?: how far the group is from a chosen target, and who is closest to the line.	11s
22	22-cross-subject.png	Cross-Subject Profiles	Cross-Subject Profiles: each student’s strongest and weakest subject.	9s
23	23-heatmap.png	Heatmap: groups by subject	Heatmap: every class against every subject, coloured by median percentile.	14s
24	24-heatmap-student-areas.png	Heatmap: students by instructional area	Heatmap, further down: every student’s instructional areas against their own overall RIT.	9s

ID	FILE NAME	SCENE	WHAT THE SCREENSHOT SHOWS	TIME
25	25-instructional-areas.png	Instructional Areas	Instructional Areas: class strengths and gaps inside each subject (from Class Profile exports).	10s
26	26-class-summary.png	Class Summary Report	Class Summary Report: a copy-ready narrative of the current view.	9s
27	27-explorer.png	Explorer	Explorer: any two measures plotted against each other, with a trend line and plain-English figures.	9s
28	28-table-groups.png	Table Groups and Seating Plan	Table Groups and Seating Plan: groups built from the data and drawn as a room (filtered to class 5A).	10s
29	29-seating-planner.png	The seating planner room view	The full-screen seating planner: move students, tables and furniture, then print.	10s
30	30-student-grouping.png	Student Grouping Report	Student Grouping Report: every record in one sortable table.	12s
31	31-priority-students.png	Priority Students	Priority Students: the records that need attention first, with the reasons.	12s
32	32-wall-posters.png	Wall Posters	Wall Posters: student-friendly class posters, previewed before printing.	13s
33	33-quiz.png	Check My Understanding (quiz)	Check My Understanding: practice questions for a data conversation, marked against the page.	13s
34	34-celebration.png	Celebration Students	Celebration Students: records with growth worth celebrating.	10s
35	35-data-check.png	Data Check	Data Check: what was read from the files, and anything worth confirming.	10s
36	36-section-help.png	Every section explains itself	Every section's ? button opens a three-part explanation in place (Growth Goals shown).	12s
37	37-student-spotlight.png	A student's spotlight	A student's spotlight: one (fictional) student across all their subjects, in a popup over the page.	12s
38	38-goal-sheet-print.png	Printed goal sheets	The printed goal sheets, as the print window shows them (fictional student).	14s
39	39-fall-baseline.png	A fall file: the page adapts	A fall file with one test window: the orange "Baseline file" banner and the page adapted to it.	15s
40	40-fall-starting-point.png	Starting Point on a fall file	Starting Point on a fall file: tiers and placement against US norms from one test window.	10s
41	41-dark-mode.png	Dark mode	Dark mode: the masthead and Insights in the dark theme.	8s
42	42-phone-view.png	On a phone	On a phone (390 pixels wide): the same dashboard, stacked into one column.	9s
43	43-privacy-offline.png	Private, offline, free	Closing: the upload panel and its privacy promise.	15s

All screenshots are real captures of the dashboard (light theme unless stated, 1440-pixel-wide window) showing the fictional sample data. Total narration about 8.2 minutes.
